Bio-degradable and recycled ID cards for eco conscious brands

27 July 2009

A new range of environmentally conscious ID cards and accessories is now available from DED Limited. Including bio-degradable and recycled cards as well as lanyards produced from a renewable source, these products are ideal for ID and membership cards for companies with an eco conscious brand strategy or message, as well as events, festivals and conferences with an environmentally friendly theme.

The new bio-degradable cards are made from PVC resin which is treated to make the cards totally environmentally friendly. Under normal circumstances the cards perform exactly the same as standard plastic cards, but when introduced into a fertile environment the breakdown process begins, taking the card from a solid card to non toxic matter in just 1 – 5 years. The bio-degradable card surface is perfectly clean and scratch free, just like a normal PVC card.

Recycled cards from Zebra are made from 52% post industrial recycled PVC core, providing an environmentally conscious and responsible solution for all types of cards. The remaining 48% consists of standard PVC core, overlay, coatings, inks, stamps and magnetic stripe. Offering the same functionality normal PVC cards from Zebra, the recycled alternatives reduce the amount of virgin petroleum based material needed for manufacturing and offer a much 'greener' solution.

Environmentally friendly lanyards are produced from a high renewable source – bamboo. Complementing this range of environmentally friendly cards perfectly, they are 3/8 of an inch thick and available in black, green, natural, blue, and red. Offering an alternative to the standard lanyards available on the market today which are manufactured from petroleum based material - these come from a real sustainable source.
